Lansing Board Of Water And Light

The Lansing Board of Water and Light (LBWL) is a municipal utility serving 100,000 electric customers, 30,000 water customers, and chilled water and steam customers, in the Greater Lansing area in Mid-Michigan.

LBWL has a special place in our hearts because LBWL was GSI's first client when we hung out our shingle in 1999. GSI's first project was to provide consulting services in support of Smallworld GIS development and data conversion. Over the years, GSI has helped the Board specify and acquire distribution technologies including Outage Management System (2003) and Mobile Data (2007). GSI is currently migrating LBWL's Smallworld GIS to 4.1 and implementing GE Electric Office suite. LBWL looks to GSI as a "Trusted Advisor" for distribution technologies.

“ The Lansing Board of Water and Light (LBWL) is a municipal utility serving 100,000 electric and 30,000 water customers. ”
