

## Maps in the Field with GSI AssetManager

In the Office

In the Truck

In the Trench

**Use facility maps in the field to support engineering and operations**

GSI AssetManager software viewing map data exported from GIS.

### Field crews increase productivity

- **Empower field crews** with access to facility info without cumbersome paper maps and calls to the office
- **Be more effective working in the field** for facility design, inspection, inventory, and storm assessment
- **Find the work location quickly** and eliminate unproductive travel
- **Provide timely map updates** to field crews without the cost and hassle of CDs and DVDs
- **Reduce the cost** of publishing paper maps and map books for field crews

View maps in construction and engineering vehicles

## Basic Mapping Module

(Included with the Facility Design, Inventory & Inspection, and Storm Assessment Modules.)

- View graphical data from external SHAPE, DXF and GeoTIFF file sources
- Add and manage multiple file layers
- Define display scales for individual layers
- Define simple point, line and color styles for individual map layers
- Save layer definitions to an external file so they can be easily recalled
- Zoom in, zoom out, and pan around on map display
- Use the integrated GPS functionality to display the current location on the map display
- Use maps with Designs, Documents and Incidents
- Automatically pan map view using GPS location

## Advanced Mapping Module

Includes all features available in the Basic Mapping Module **PLUS...**

- Display individual feature properties of selected features
- Find and go to features on map using simple database queries
- Publish map files to trucks automatically
- View graphical data from external MapInfo TAB/DAT file sources

Design the display styles of the maps to match your printed versions, including:

- Point, line, and color styles based on feature attributes
- Annotation, orientation, font styles and color
- Use property values to define annotation orientation of individual text strings
- Choose property values on feature records to be annotated on map displays
- Select and interact with features on map

GSI partners with ESRI, GE Energy, Itron, Trimble and Xplore Technologies to deliver total field solutions.
